AI & ESG: Transforming Reporting for the Future

Navigating complexity, risks, and opportunities in sustainable disclosure.

Generative AI is reshaping how we approach Environmental, Social, and Governance reporting. This deck explores the transition from manual overload to predictive precision—and how to navigate the inherent risks.

NotebookLM

The Executive Roadmap

The Demand

ESG is now critical for long-term success, yet only 22% of CFOs feel fully prepared for climate reporting requirements.

The Solution

AI automates the analysis of large datasets and provides predictive insights, with 75% of companies planning to integrate these technologies by 2027.

The Caveat

Adopting AI brings challenges regarding data privacy, security breaches, and algorithmic bias that require specialised management.

NotebookLM

The Rising Tide of ESG Integration

82%

of executives recognise the crucial role of ESG for long-term success.

85%

of organisations foresee digital innovations as the primary driver of transformation.

Key Insight

The market is shifting. Investors are seeking options that align with sustainable developments, and job markets are evolving with 'AI machine learning' and 'sustainability specialists' becoming the top highest-growing roles.

NotebookLM

The Bottleneck: Data Volume and Inconsistency

The Challenge:

Companies are overwhelmed by the volume of data required for disclosure and the fragmented nature of regulatory proposals.

71%

of investors identify **incomplete and inconsistent** ESG data as a major obstacle to sustainable investing.

Regional Context: This sentiment is mirrored in the Asia-Pacific (APAC) region, where respondents cite similar barriers to assessing performance and managing risk.

NotebookLM

A Fragmented Global Regulatory Landscape

European Union

Corporate Sustainability Reporting Directive (CSRD).

Requires detailed data from companies with 500+ employees.

Expanding to SMEs and non-EU companies.

Singapore

SSFA tackling net-zero financing gap.

ACRA and SGX established the Sustainability Reporting Advisory Committee.

Hong Kong & China

HKEX requiring Scope 1 & 2 reporting by 2025.

China aiming for full Corporate Sustainability Disclosure Guidelines by 2030.

NotebookLM

How AI Unlocks ESG Potential

Traditional Reporting

- Manual gathering
- Prone to human error
- Retroactive / Historical

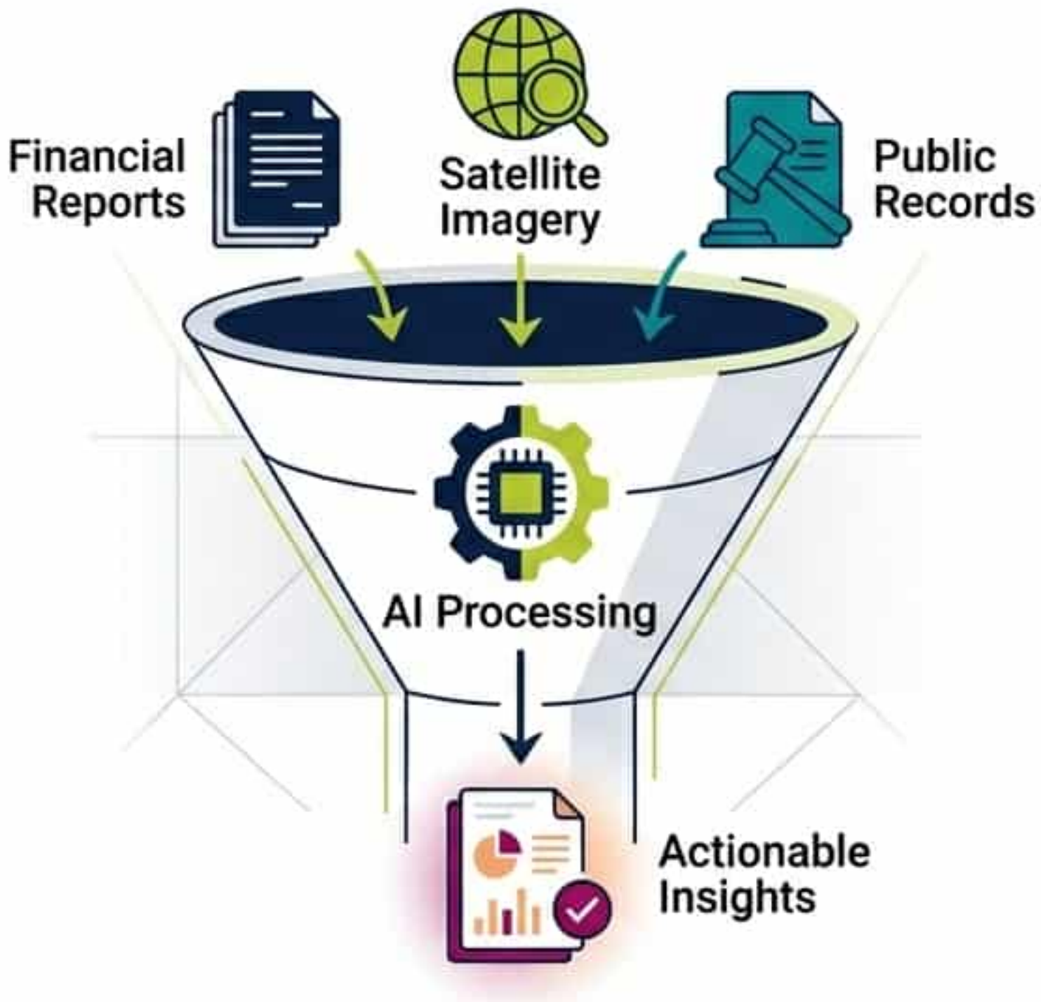
AI-Driven Reporting

- Automated collection
- Real-time insights
- Predictive analysis

Impact: Leaders in retail using these tools achieve **3x better** performance than competitors. **Over half** of CEOs report increased employee efficiency and reduced errors.

NotebookLM

Finding Signal in the Noise: Unstructured Data



- **Capability:** AI automates the collection of diverse data from financial reports, satellite imagery, and public records.
- **Case Study**: OpenSC uses AI, blockchain, and IoT sensors to verify supply chains.
- **Partnership**: In collaboration with the World Wildlife Fund (WWF), platforms allow consumers to trace products to their source, verifying ethical claims.

NotebookLM

From Reporting to Prediction

The Shift:

Machine learning algorithms identify **trends and anomalies** that human analysis would miss, tracking long-term performance patterns.

Strategic Value:

Forecast future sustainability risks and **proactively adjust strategies** to stay ahead of regulatory requirements and KPIs.

99% Accuracy

observed in a recent Fortune 500 study predicting performance scores using AI-driven systems.

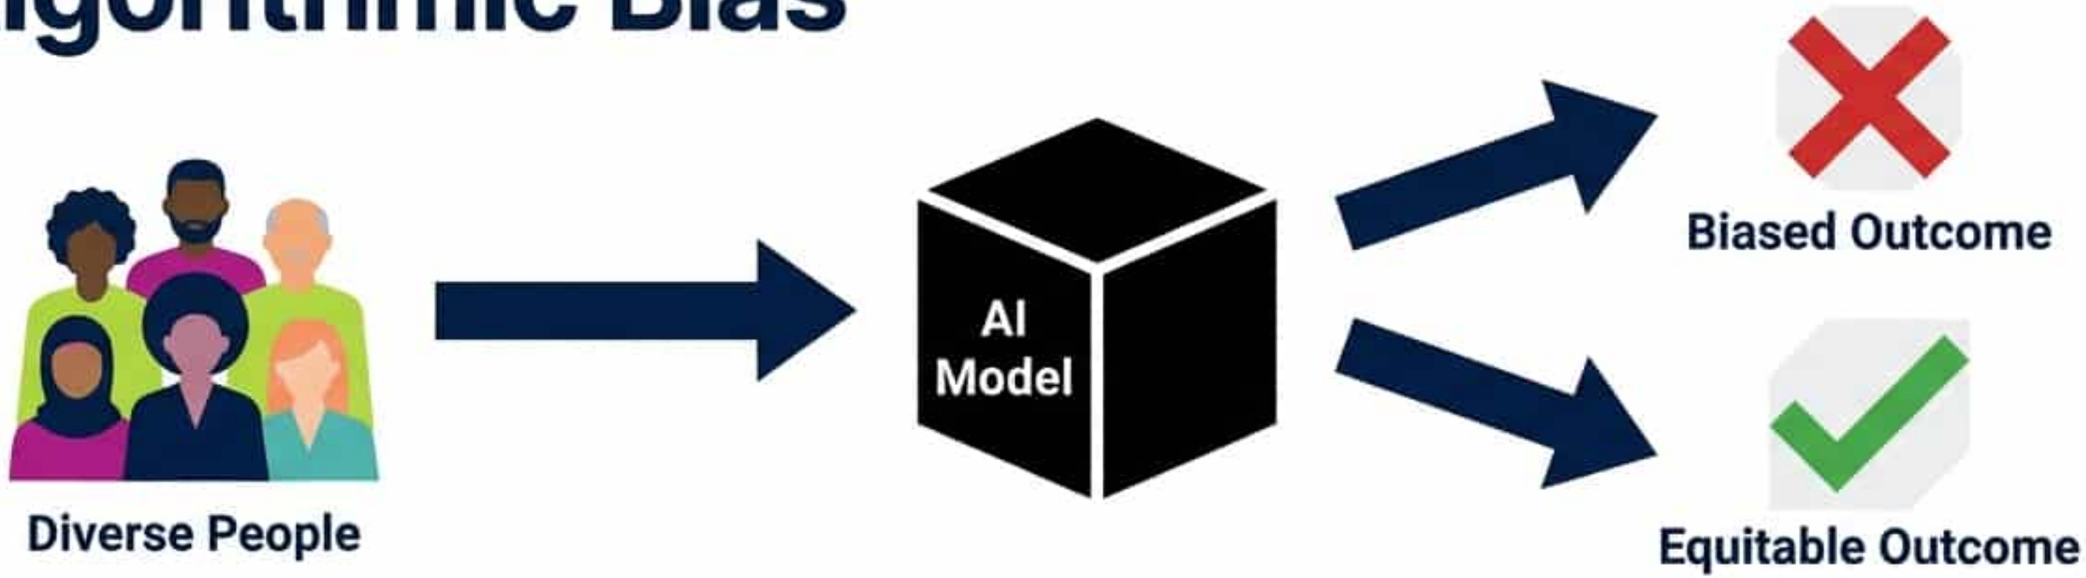
NotebookLM

The Double-Edged Sword: Security Risks

- **The Vulnerability:** AI systems require access to massive amounts of confidential data, increasing the surface area for breaches and unauthorised access.
- **Real-World Warning:** In 2025, a ransomware group compromised Schneider Electric's cloud-based platform, threatening the integrity of emissions data.
- **Executive Focus:** 48% of business executives now place the highest importance on data protection, with 34% focusing specifically on cloud security.

NotebookLM

The Challenge of Algorithmic Bias



The Issue:

AI systems can reflect societal biases present in training data or created by non-diverse development teams. This leads to unequal treatment in ESG assessments.

The Mitigation:

Research indicates that applying **'stratified sampling'** and **'adversarial data'** can check the fairness of models.

Goal:

Fairness-aware algorithms are essential to avoid reinforcing existing societal biases.

NotebookLM

Bridging the Skills Gap

The Gap: 60% of workers will need training by 2027. Analytical thinking and AI expertise are top priorities.

Regional Disparity (Employees feeling supported in AI skills):

Takeaway: Companies must prioritise continuous upskilling to keep a 'human in the loop' for verifying AI-generated insights.

PRESGO
formerly convene esg

Navigating Safely with Presgo

Presgo is a leading, flexible, AI-powered platform that adapts to industry-specific needs.

The Promise: We allow companies to embrace the efficiency of AI—simplifying and speeding up the reporting process–while using a dedicated software solution designed specifically for the unique security challenges of sustainability tracking.

Core Offer: AI-powered capabilities for data analysis, tracking, translation, and generating fully assessed disclosures.

NotebookLM

Core Capabilities & Integration

OCR Technology
Utilises Optical Character Recognition to process and capture large datasets from documents, improving accuracy and transparency.

Scalable Frameworks
AI-assisted scoring that aligns with global frameworks such as GRI and TCFD.

Benchmarking
Goal-setting features incorporate ESG metrics into daily operations, making sustainability a core part of business performance.

NotebookLM

Efficiency, Accuracy, and Adaptation

Real-Time Monitoring:
Continuous monitoring of ESG performance allows for quicker adaptation to regulatory changes.

Efficiency:
Automation of data collection and AI-assisted translations result in simplified workflows.

Reliability:
Validation tools detect anomalies to help companies deliver more reliable reports, bridging the trust gap.
